You can't shake the  
taste of the blood

In a free society, you can own both.

IG@9MMSMG

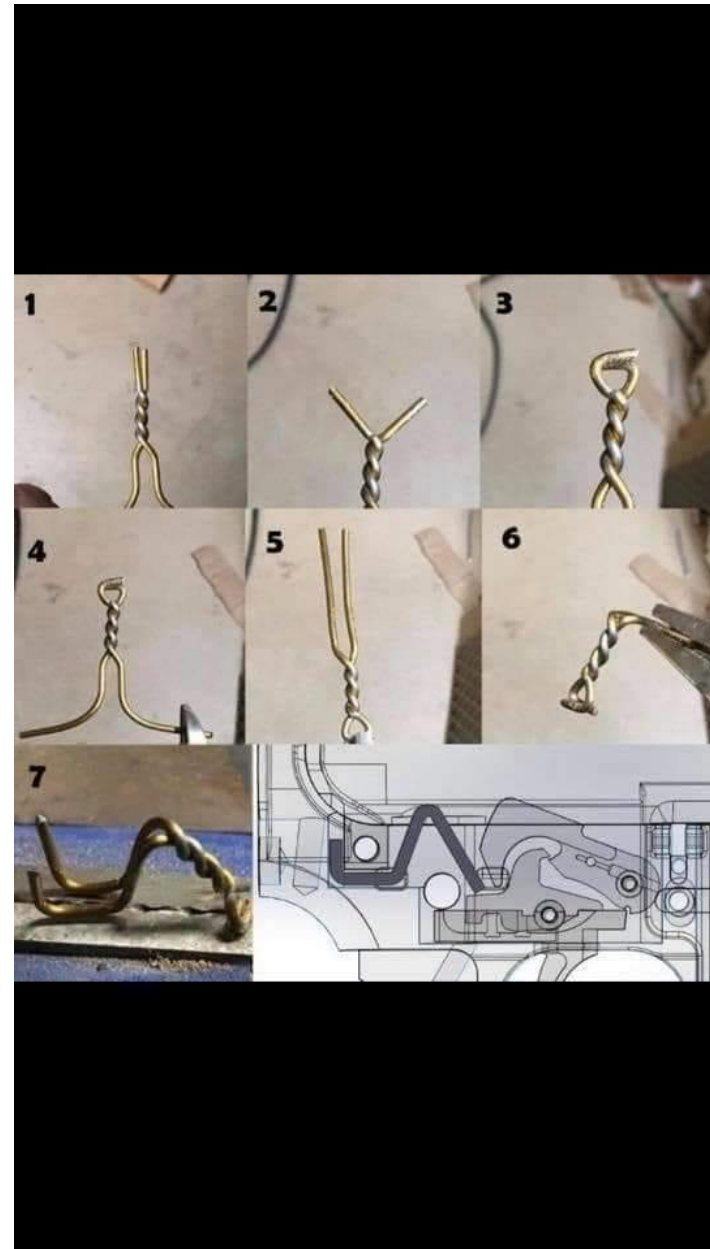

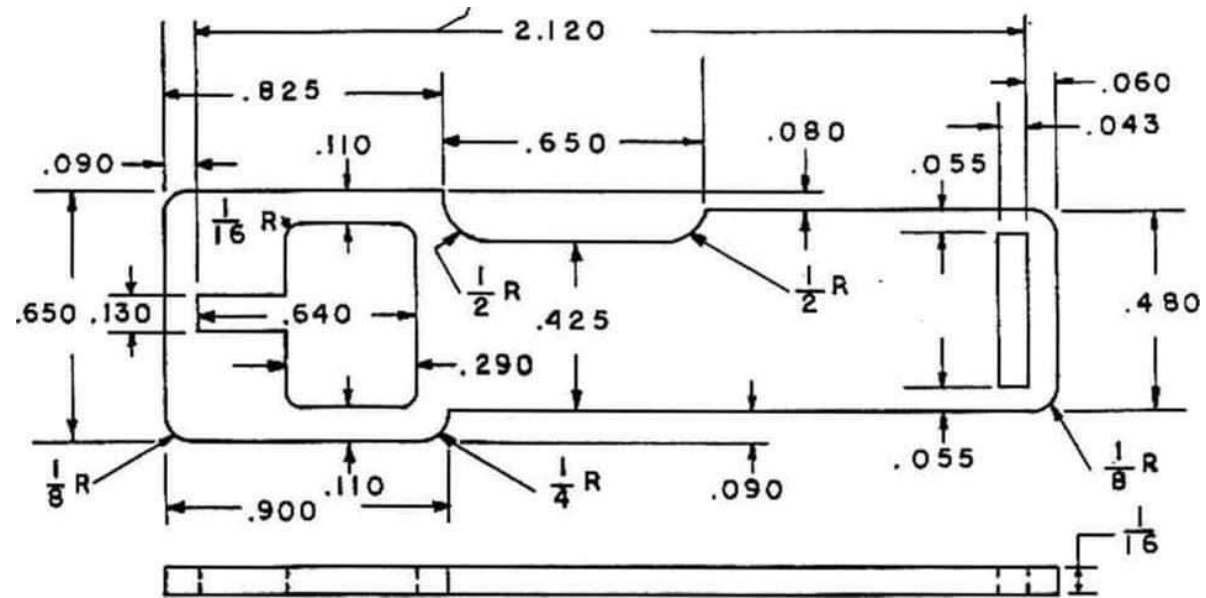

Cut the upright part to length and file or grind it to shape. File a slight bevel at the to rear of the upright.

The parts for the Lightning Link can be made from tool steel, machined with great precision, hardened and tempered with loving care, the polished to a high gloss that your mother would be proud of. On the other hand, using only a couple of pieces of power hacksaw blade to make the parts from, a dremel tool, hand drill and one or two files to do the work, you can cut out the Lightning Link in about an hour.

The only complaint I've ever heard about the Lightning Link is it converts the firearm to full auto only. I can't see that's a problem. No one says you have to hold the trigger down until the magazine's empty. I've found with a little practice it's easy to fire two shot bursts using the Link.

Also keep in mind; that it takes only about ten seconds to install the Lightning Link in a standard unaltered AR-15, and only about six seconds to remove it. Going from semi-auto to full and back to semi is only a matter of seconds.

In normal semi-auto operation the hammer is cocked by a rearward movement of the bolt carrier, as the carrier moves forward, the hammer is caught and held in the cocked position by the sear located on the forward part of the trigger catching in the sear notch, on the hammer. If you hold the trigger after a shot's fired the sear will not catch in the hammer's sear notch when the hammer cocks because the sear is depressed below the arc of the hammer notch.

What happens is because the trigger is being held back; the disconnecter hook is tipped forward and in position to catch the hammer, stopping it from following the bolt carrier forward. When the trigger is released, it allows the hammer to slip from under the disconnecter hook and be caught by the trigger sear in the hammer sear notch. Making it necessary to pull the trigger for each shot.

#### Assembly

Refer to the first drawing. Install the parts in the lower receiver. See drawing [A]. Tip the weapon so the links upright rests against the rear of the receiver. Close the upper until the take-down pin post is far enough into the lower receiver, that when you tip the firearms muzzle down the links upright can rest against the post. Continue closing the weapon until it's completely closed. NOTE.... This first time you may have trouble getting the link upright to slide in place between the rear of the takedown pin post and the bolt carrier. All I can tell you is wiggle and jiggle things until it goes into place. It will fit in place much easier after its shaped by the bolt carrier.

After the takedown pin is in place, hold the trigger back and operate the bolt carrier about five times. The bolt carrier hitting it forms the bend in the top of the links upright at this time. See drawing [D]. Be sure to let the bolt slam with full force each time. Now's the time to find out if everything's working right. Cock the weapon, point it in a safe direction and pull the trigger. You should hear the hammer fall. Keep holding the trigger, cock the weapon, and release the trigger. Pull the trigger, nothing should happen, the Lightning Link will have released the hammer when the bolt carrier closed.

#### Test Fire

Load two rounds in the magazine. The first will fire when you pull the trigger, the second will fire automatically. Check the brass for any problems. If all's well, load five rounds and fire. If all goes well, load her up and let her rip.

Ultimate start low here for about 5 minutes.

Remove from heat, remove and enjoy!

## Slow Cooker Method

Add chicken, chicken stock, garlic onion, cilantro, cumin, chili powder, salt and pepper to a 5 quart slow cooker.

Cook for 8 hours on low.

Chopped chicken with two bones and skin in white beans and fresh cilantro and cumin for another 10 minutes.

Serve and enjoy!

## Christchurch Shooting Oddities

- Movements and precision of shooter clearly indicate military training you do not receive at a "gun club."
- Suspect traveled all over the world including Pakistan where he trained Muslims.
- Not from NZ and attacks a mosque once under investigation for links to Al Qaeda.
- Christchurch had a blessed spy ring uncovered in 2011 after an earthquake. Portland shooting survivors visited Christchurch after shooting.
- Suspect streamed 15 minutes of copyrighted music over Facebook without his stream being shut down.
- Suspect used many names and talking points from Ethan and Ethan on his guns, armor, and in his manifesto. Talks continuously about white genocide but doesn't talk about 4/8 Chan's biggest talking point: Jewish Suprematism. No mention of Kalergi plan or Zionist pushing of mass immigration.

free\_rope\_rides\_2.0 Blasting cap tutorial, screenshot it. Plastic test tubes are the best container for caps to use since the base is seamless and safer. TATP and HMTD are both good for caps, be careful, they can be sensitive and can take hands/fingers off. Scale any recipes to yield no more than 3 grams, store wet, under water until ready to make caps. Don't do anything dumb or dangerous, know the laws of you choose to it ignore them that's up to you.

### Preparation

The preparation of HMTD always presents the risk of premature detonation and should not be attempted by amateurs. But if you really want to know:

14 g of [hexamine](#) is dissolved in 45 ml of [hydrogen peroxide](#) 30% concentration and stirred (mechanically) at 0 °C. An amount of 21 gram of finely powdered [citric acid](#) is then slowly added under continuous stirring for 3 h, at 0 °C. After 3 hours, the product is allowed to reach room temperature and left for 2 h. The white crystalline product is filtered off, and washed thoroughly with water, to remove any water soluble impurity and rinsed with methanol. The wet product is air dried. This part is risky as the product may explode during drying. The yield is around 50-70%.

Larger amounts are not safe to handle, so it's best to try to make small amounts based on the process above.

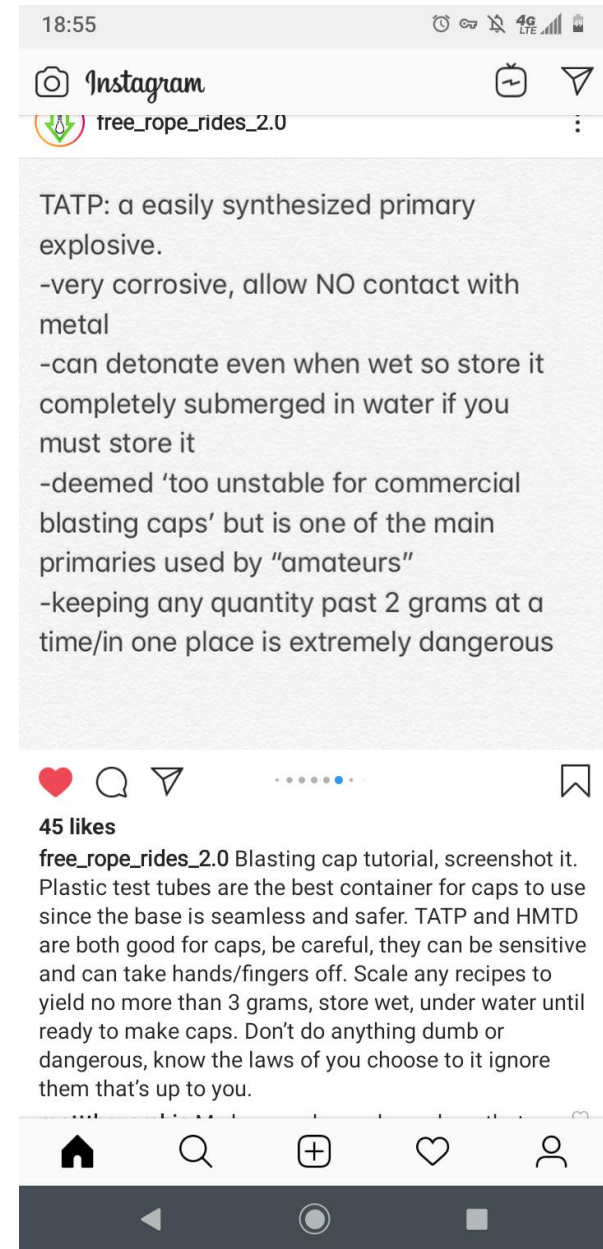

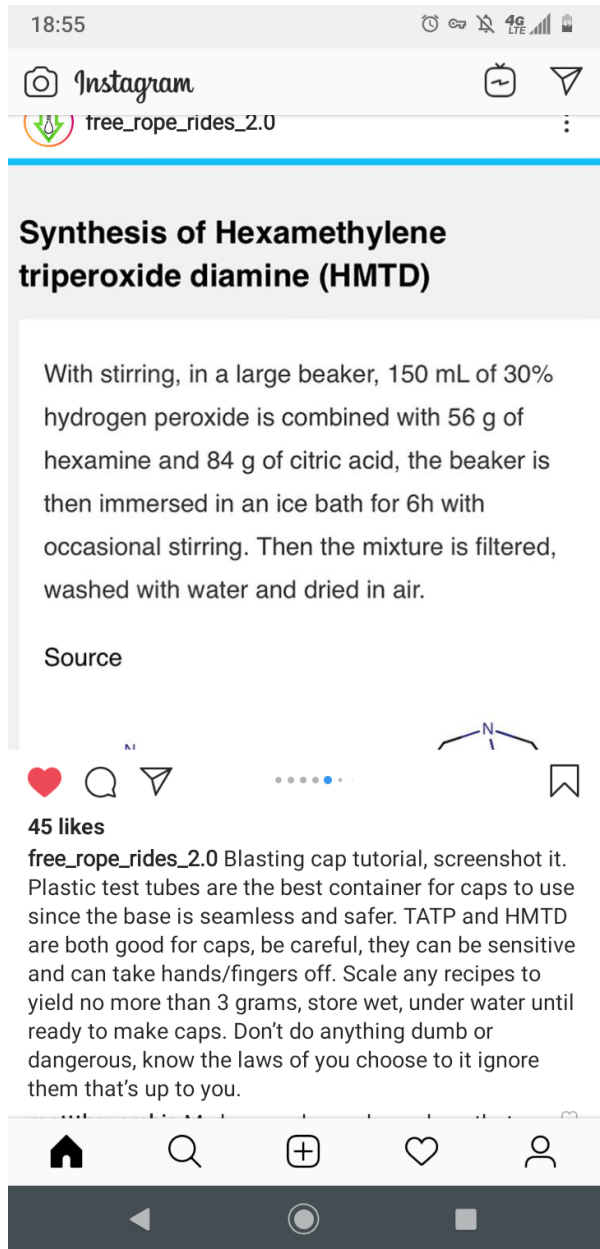

### Projects

Due to its instability, HMTD doesn't have many uses outside amateur explosives. As it is a stronger initiating explosive than [mercury\(II\) fulminate](#), it can be used to make blasting caps, albeit they should be used quickly. Never use metal for these blasting caps, as this increases

Uses and discovery [edit]

7/7

PLX was invented during World War II by the Picatinny Arsenal in New Jersey. It was originally designed to clear minefields by being spread via plane over the targeted area or poured from a safe distance and detonated by troops on the ground.

This explosive can also be gelled through the addition of nitrocellulose, ETN, or any number of soluble nitrate esters or gelling agents. This allows for powdered metals, such as aluminum or magnesium, to be suspended in the mixture. The metal powders act as fuel, increasing heat and energy output but lowering the brisance and VoD. The result is a more sustained blast wave and a "push and heave" effect, desirable for thermobaric purposes. Trzcinski<sup>[who?]</sup> reports that 200 grams of a mixture of NM with PMMA as gelling agent and AlMg (45:55, mean particle size = 63 microns) as fuel, in a ratio of 67.2/2.8/30 by mass, has a peak overpressure of 120 kPa 2 m from the (open air) blast site, a 1.65 TNT equivalency in peak pressure, and a 1.62 equivalency in shockwave impulse.<sup>[1]</sup> This means that more than 50 % of eardrums will be perforated in case of 200 g PLX/magnesium-aluminium alloy detonation at a distance of 2 m. 104 kPa is widely regarded as a pressure where 50 % of eardrums fail.<sup>[2]</sup> It's still 3 - 5 less than needed to induce 50 % of fatalities via pulmonary injury as per Bass/Bowen equations (standing adult, facing any direction).<sup>[3]</sup>

PLX has been implicated as one of the materials capable of being used in catastrophic terrorism, as most steel core columns can not withstand the detonation of 10 - 30 kg PLX in direct contact (explosive on bare steel). Nitromethane and its gelling agents are freely sold to the public in the US, though. Its sale to the public has been banned in the EU in september 2014.<sup>[4]</sup>
